

Felipe Martins

Mid-Level Data Engineer with comprehensive experience managing the full data lifecycle, from designing Medallion architectures within Microsoft Fabric to executing advanced SQL optimizations in Databricks. Currently leading the technical lifecycle of enterprise data projects, demonstrating full autonomy in orchestrating end-to-end workflows across Lakehouse and Warehouse environments. Strong background in Python, ETL systems (including Apache Airflow), Power BI analytics, and implementing rigorous data quality and CSV validation protocols to deliver scalable, high-performance solutions that align with agile business requirements.

Employment History

Data engineering, AS2 GROUP , São José dos Campos

MIDLEVEL | J & J Contractor
APRIL 2026 – PRESENT

Promoted to lead the technical lifecycle of data projects, moving beyond pipeline management to proposing and implementing original architectural ideas for the D&A team. I exercise full autonomy in developing and maintaining complex data cleaning algorithms and optimizing advanced SQL queries within Databricks, ensuring high-performance data delivery with minimal supervision. Furthermore, I spearheaded the design and orchestration of end-to-end data workflows within Microsoft Fabric, implementing a Medallion architecture across Lakehouse and Warehouse environments utilizing Pipelines and Dataflows. Additionally, I have integrated rigorous data quality workflows using Jira for project tracking and CSV validation protocols to guarantee the integrity of large-scale datasets, aligning technical execution with agile business requirements.

Data engineering, AS2 GROUP , São José dos Campos

JUNIOR | J&J Contractor
JANUARY 2026 – APRIL 2026

Promoted to Junior Data Engineer following a successful internship, taking over full ownership of data pipeline management and creation for the D&A team. Leading the development and maintenance of data cleaning algorithms. Continuously executing and optimizing advanced SQL queries within Databricks environments.

Data engineering, Johnson & Johnson, São José dos Campos

INTERN
JANUARY 2024 – JANUARY 2026

During my internship on the Data & Analytics team, I gained hands-on experience in analyzing and maintaining data flows using JavaScript (Node-RED), and in creating and managing databases with SQL (Databricks and Microsoft SQL Server). I automated processes and websites using Python, Selenium, and web scraping techniques, and also developed internal systems for the company using Python, applying software development principles (CSV and SDLC) and Git to version control my code.

I conducted and analyzed business data studies using Python, pandas, and matplotlib, and created insightful dashboards with Power BI. My role also involved designing and managing ETL workflows with Apache Airflow and deploying data solutions in containerized environments using Docker. Additionally, I applied unsupervised learning techniques to uncover new insights from data.

IT Technical Support Internship, IT Automotive Fluids, São José dos Campos

INTERN
JUNE 2023 – DECEMBER 2023

During my IT Technical Support Internship at IT Automotive Fluids, I gained hands-on experience in troubleshooting technical issues, providing user support, and maintaining computer systems.

- Skills**
- Python
 - SQL
 - Git
 - Data analysis
 - Machine learning
 - React
 - PowerBI
 - ETL systems
 - JavaScript
 - English
 - Team Work
 - CSV
 - SDLC
 - Fabric
 - Medallion

Education

B.S.in Science and Technology
Federal University of Sao Paulo

MARCH 2022 – DECEMBER 2025

Experience creating artificial intelligence for classifying fake news and developing websites with React. I also made a software engineering project to use a LLM to sell a product, using scrum.

You can check the github repositories in the tab **Links**

B.S. in Computer Science
Federal University of Sao Paulo

MARCH 2026 – DECEMBER 2026
